Cause: Case 1: Some part of the logon string entered was incorrect. After three failed attempts, Oracle Reports Builder displays a dialog box with this message. Case 2: The NLS_LANG environment variable value may be invalid.

Action: Case 1: Accept the dialog box. Confirm the logon information with the system administrator, if necessary. Go back into Oracle Reports Builder and try connecting to Oracle again. Cause: A data link was defined that created a sibling of a dimension group within a cross product group. No siblings of dimension groups are allowed within the cross product.

Action: Delete the sibling of the dimension group.

Level: 1

Type: ERROR

Impact: Data

REP-01302: The cross product has two or more child groups.

Cause: A cross product group has more than one child group. Only one child is allowed per cross product group.

Action: Remove all but one of the child groups to the cross product group.

REP-01305: Frame {0} intersects but does not enclose object {1}.

Cause: The report layout contains a frame that does not completely enclose the named object. Thus, the object is not considered to be inside the frame.

Action: To enclose the object with the frame, resize or move the frame.

Level: 1

REP-01306: Summary column {0} has an invalid source.

Cause: An invalid source was specified for the summary column. A summary column's source must be from the same group as the summary column, or from a group below the summary column.

Action: Change the source of the summary column to be from the same group as the summary column or from a group below the summary column.

Level: 1

Type: ERROR

Impact: Other

REP-01307: Summary column {0} has an invalid product order.

Cause: The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column's product order. The source column of the summary must be at least as frequent as the summary, which means that the summary's Product Order should be some subset of the source column's Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column's Product Order. For example, if the source column's Product Order were A,B,C, then the summary column's Product Order would have to be either A (by itself) or A,B. The summary's Product Order could not be B,A.

Action: Take the following actions to correct this error: If Case 1: Change the Product Order of the summary such that it is a subset of its source column's Product Order. If Case 2: Change the Product Order of the summary such that it is a prefix of the Source column's Product Order.

Level: 1

Type: ERROR

Impact: Other

REP-01308: Placeholder column {0} is not supported in a cross product.

Cause: An attempt was made to create a placeholder column inside of a cross product group. Cross product groups cannot contain placeholder columns.

Action: Delete the placeholder or move it outside the cross product group.

Level: 1

Type: ERROR

Impact: Other

REP-01309: Report level summary {0} cannot be a percent of total.

Cause: A summary was created at the report-level (that is, a summary outside of all the groups in the data model) with a Function of % of Total. This Function makes no sense for a report-level summary because it will always be 100%.

Action: Delete the summary or move it into a group where it will make sense.

Level: 1

Type: ERROR

Impact: Other

REP-01310: Boilerplate {0} references &{1} which is not a field.

Cause: A boilerplate object has a reference to a field that does not exist. It could be that the field being referenced was deleted or renamed and so this reference in the boilerplate object is now invalid.

Action: Depending on circumstances, remove the reference, replace it with a reference to another field, or create the field that it references.

Level: 1

Type: ERROR

Impact: Other

REP-01311: Object {0} with page-dependent references have been changed to fixed sizing.

Cause: A field or boilerplate object has a reference to a page calculation or a total number of pages variable. (This is known as a forward reference.) Such layout objects must be fixed in size both horizontally and vertically.

Action: The layout object's Horizontal and Vertical Elasticity have been set to Fixed by Oracle Reports Builder. Check the output to ensure that the values are not being truncated. If they are, enlarge the layout object so that it is large enough to contain the values.

Level: 1

Type: ERROR

Impact: Other

REP-01312: Page-level column {1} may not be referenced from graph {0}.

Cause: A column passed to a graph is or depends upon a page-level summary (that is, a summary with a Reset At or Compute At of Page). A column being passed to a graph cannot be or depend upon a page-level summary.

Action: Do not pass the column to the graph.

Level: 1

Type: ERROR

Impact: Other

REP-01313: Page-level column {1} may not be referenced from group filter {0}.

Cause: A column that was referenced in a group filter is or depends upon a page-level summary (that is, a summary with a Reset At or Compute At of Page). A column referenced by a group filter cannot be or depend upon a page-level summary.

Action: Do not reference the column in the group filter.

Level: 1

REP-01318: An error occurred while setting transaction to read-only.

Cause: Having specified READONLY=YES, this error occurred at the start of report execution, while ending the current transaction (with a COMMIT) and starting the read-only transaction, or at the end of report execution, while ending the read-only transaction (with a COMMIT).

Action: Verify the database connection, and verify that that no cursors or locks were left pending by the previous transaction.

Level: 1

Type: ERROR

Impact: Transactioning

REP-01319: Implicit anchoring algorithm cannot uniquely identify the anchoring object {0}. Arbitrarily choosing {1}.

Cause: The specified object (object1) is in the "push path" of two objects and it is equidistant from both objects. As a result, Oracle Reports Builder cannot use its normal criteria (shortest distance) to determine the implicit anchor. In the absence of its normal criteria, Oracle Reports Builder randomly creates an implicit anchor to the specified object (object2). Note that the implicit anchor may vary between runs of the report.

Action: To avoid the random creation of an implicit anchor, explicitly anchor the specified object (object1) to another object.

Level: 1

Type: ERROR

Impact: Other

REP-01320: Program unit {0} references a column with invalid ID {1}.

Cause: A report was run containing invalid PL/SQL (for example, PL/SQL that did not compile). The PL/SQL source included a column reference that cannot be resolved.

Action: Check the column references in the PL/SQL source, recompile all of the PL/SQL source in the report, and rerun the report.

Level: 1

Type: ERROR

Impact: Other

REP-01322: Page break after on object {0} has no effect.

Cause: A Page Break After was activated on an object that has no other objects anchored to it (implicitly or explicitly). In this case, Page Break After has no effect and is invalid. Notice that this is a warning, not an error message.

Action: Deactivate Page Break After for the object.

Level: 1

Type: ERROR

Impact: Other

REP-01323: Output columns in format trigger {0} are not allowed.

Cause: In the format trigger for the specified object, an attempt was made to set the value of an Oracle Reports Builder column parameter. For example, the value of a column called COUNT1 can be used in a condition (for example, IF :COUNT1=10), but its value cannot be directly set in an assignment statement (for example, COUNT1=10).

Action: Remove the assignment statement from the format trigger.

Level: 1

Type: ERROR

Action: Remove the assignment statement from the group filter.

Level: 1

Type: ERROR

Impact: Other

REP-01325: Output columns in a Between Page Trigger are not allowed.

Cause: In the Between Page trigger, an attempt was made to set the value of an Oracle Reports Builder column or parameter. For example, the value of a column called COUNT1 can be used in a condition (for example, IF :COUNT1=10), but its value cannot be directly set in an assignment statement (for example, COUNT1=10).

Action: Remove the assignment statement from the group filter.

Level: 1

Type: ERROR

Impact: Other

REP-01326: Trigger {0} writes to column {1} at the wrong frequency.

Cause: In a report trigger, an attempt was made to set the value of an Oracle Reports Builder column at the wrong frequency in the report. Only report-level columns or parameters can be referenced and set, and any page-dependent columns (that is, Reset At of Page) or columns that rely on page-dependent columns cannot be referenced or set.

Cause: In a formula column, an attempt was made to set the value of an Oracle Reports Builder column at the wrong frequency in the report. Only columns that are in the same group or in a higher group in the group hierarchy can be referenced and set. For example, a formula for a report-level column can only reference other report-level columns.

Action: Verify that the columns whose values are referenced or set are in the same group or in a higher group in the group hierarchy.

Level: 1

Type: ERROR

Impact: Other

Cause: A lexical parameter was created that changes the number, type, or names of columns, or introduces new dependencies on computed columns or new bind references, when the report is run.

Action: Change the lexical parameter so that it does not change columns or introduce new dependencies or bind references.

Level: 1

Type: ERROR

Impact: Other

REP-01331: Column {0} cannot be linked to column {1} because the child column is determined by a lexical parameter.

Cause: A data link was created in which child column's value is determined by a lexical parameter, which is not allowed.

Action: Replace the child column of the data link with another column.

Level: 1

Type: ERROR

Impact: Other

REP-01332: Group filter for {0} cannot reference column {1}. It is not a valid database column or it depends on a related query.

Cause: A group filter was created that references a database column not in the group's query or in a query above it, or references a computed column that depends on an unrelated column.

Action: Remove the offending reference from the group filter.

Level: 1

Type: ERROR

Impact: Other

REP-01333: Unsupported layout: a matrix may not be inside another matrix.

Cause: A matrix layout was created nested within another matrix layout, which is not allowed.

Action: Redesign the layout to avoid the nesting.

Level: 1

Type: ERROR

Impact: Other

REP-01335: Variable rotated text {0} is treated as fixed/contract width.

Cause: The report contains a boilerplate text object that was rotated to an angle that is not a multiple of 90 degrees, although both Horizontal and Vertical

Elasticity values were set to Variable or Expand. In this case, the Horizontal Elasticity is treated as Fixed (if Expand was specified) or Contract (if Variable was specified), and this warning is displayed.

Action: Consider changing the Horizontal and Vertical Elasticity values for this boilerplate object.

Level: 1

Type: ERROR

REP-01336: The source of field {0} is page-level calculation {1}. {2}.

Cause: The specified field references a page summary owned by the named group, but there is no repeating frame for that group that surrounds the field.

Action: Create a repeating frame whose Source is the named group to surround the field. If such a repeating frame already exists, extend it to enclose the field.

Level: 1

Type: ERROR

Impact: Other

REP-01337: Boilerplate {3} references field {0}, whose source is page-level calculation {1}. {2}.

Cause: The specified boilerplate object references the specified field, whose Source is a page-level computation. However, there is no repeating frame (whose Source is the named group) surrounding the field.

Action: Create a repeating frame whose Source is the named group to surround the field. If such a repeating frame already exists, extend it to enclose the field.

Level: 1

Type: ERROR

REP-01338: Column mode is not allowed on repeating frame {0}.

Cause: The Column Mode setting for a repeating frame does not satisfy either of the following conditions: Print Direction of Down and a Vertical Elasticity of Fixed. Print Direction of Across and a Horizontal Elasticity of Fixed.

Action: Change the Print Direction or Vertical/Horizontal Elasticity of the repeating frame, or deactivate Column Mode.

REP-01339: Graph {0} is missing a data column specification.

Cause: A value was specified for the graph Query, but no columns were specified to be passed from the report to the graph document.

Action: To pass no data from the report to the graph document, specify nothing for the graph Query and Source. To pass data, specify the columns to be passed in addition to the graph Query and Source.

Level: 1

Type: ERROR

Impact: Data

REP-01340: Passed-in columns do not match report definition {0}.

Cause: Another component (for example, Oracle Forms) passed a query to Oracle Reports Builder and there is a mismatch between the columns passed and the columns expected by Oracle Reports Builder. Possible causes of this error include: Case 1: Oracle Reports Builder was expecting more or fewer columns than the number that was actually passed by the calling application. Case 2: The parameter list of the calling application described a column differently than what Oracle Reports Builder expected. For example, if the report's query selects a character column and the calling application assigns that column a date data type, this error is raised.

Action: Take the following actions to correct this error: If Case 1: Ensure that the calling application is passing the same number of columns that Oracle Reports Builder expects. If Case 2: Ensure that the datatypes and names of the columns being passed by the calling application match the datatypes and names in the report.

Level: 1

Type: ERROR

Impact: Other

REP-01341: Data truncation is possible in column {0}.

Cause: The database column's width in the report is defined to be less than its width in the database. This can occur when the columns in the database are updated subsequent to the creation of the report definition.

Action: Force the query to be reparsed. One method is to type a space at the end of a line in the SELECT Statement and then accept the SQL Query Statement dialog box.

TOP-00043: Missing class for indicator field value [{0}] of type [{1}].

Cause: TopLink is missing the class for indicator field value classFieldValue of type type. There was no class entry found in the inheritance policy for the indicator field value that was read from the database. It is likely that the method addClassIndicator(Class class, Object typeValue) was not called for the field value. The class and typeValue are stored in a hash table, and later the class is extracted from the hash table by passing typeValue as a key. Because Integer(1) is not equivalent to Float(1), this exception occurs when the type of typeValue is incorrectly specified.

If multiple tables are specified in the descriptor and the join expression is customized, then the primary keys for all the tables must be specified. If the primary keys are not specified, then the exception occurs.

TOP-00048: Multiple writable mappings exist for the field [{0}]. Only one may be defined as writable, all others must be specified read-only.

Cause: Multiple writable mappings for the field `fieldName` are defined in the descriptor. Exactly one must be defined as writable; the others must be specified as read-only. When multiple write mappings are defined for the field, `TopLink` is unable to choose the appropriate mapping for writing the value of the field in the database row. Therefore, the exception is raised during the validation process of descriptors. The most common cause of this problem is when the field has direct-to-field mapping, as well as one-to-one mapping. In this case, the one-to-one mapping must either be read-only or a target foreign key reference.

TOP-06005: The object [{0}], of class [{1}], with identity hashcode (System.identityHashCode()) [{2}], {3} is the original to a registered new object. The `UnitOfWork` clones registered new objects, so you must ensure that an object {3} is registered before it is referenced by another object. If you do not want the new object to be cloned, use the `UnitOfWork.registerNewObject(Object)` API. If you are still having problems, you can use the `UnitOfWork.validateObjectSpace()` {3} method to help debug where the error occurred. For more information, see the manual or FAQ.

Cause: The object clone of class `clone.getClass()` with identity hash code `(System.identityHashCode()) (System.identityHashCode(clone))` is the original to a registered new object.
