

**CONTENTS INCLUDE:**

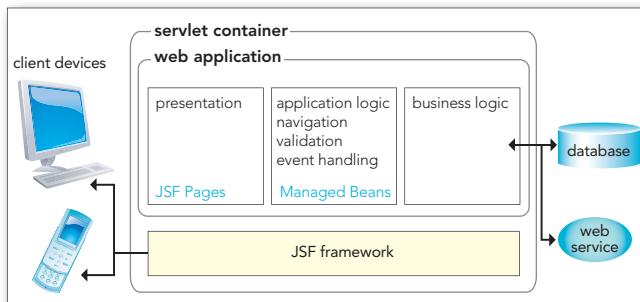

- Development Process
- Lifecycle
- faces-config.xml
- The JSF Expression Language
- JSF Core Tags
- JSF HTML Tags and more...

ABOUT THIS REFCARD

JavaServer Faces (JSF) is the “official” component-based view technology in the Java EE web tier. JSF includes a set of predefined UI components, an event-driven programming model, and the ability to add third-party components. JSF is designed to be extensible, easy to use, and toolable. This refcard describes the JSF development process, standard JSF tags, the JSF expression language, and the `faces-config.xml` configuration file.

DEVELOPMENT PROCESS

A developer specifies JSF components in JSF pages, combining JSF component tags with HTML and CSS for styling. Components are linked with *managed beans*—Java classes that contain presentation logic and connect to business logic and persistence backends. Entries in `faces-config.xml` contain navigation rules and instructions for loading managed beans.

A JSF page has the following structure:

JSF Style	Proper XML
<pre> <html> <%@ taglib uri="http:// java.sun.com/jsf/ core" prefix="f" %> <%@ taglib uri="http:// java.sun.com/jsf/ html" prefix="h" %> <f:view> <head> <title>...</title> </head> <body> ... </body> </f:view> </html> </pre>	<pre> <?xml version="1.0" encoding="UTF-8"?> <jsp:root xmlns:jsp="http://java.sun.com/ JSP/Page" xmlns:f="http://java.sun.com/jsf/core" xmlns:h="http://java.sun.com/jsf/html" version="2.0"> <jsp:directive.page contentType="text/ html; charset=UTF-8"/> <jsp:output omit-xml-declaration="no" doctype-root-element="html" doctype-public="-//W3C//DTD XHTML 1.0 Transitional//EN" doctype-system="http://www.w3.org/TR/ /xhtml1/ DTD/xhtml1-transitional.dtd"/> <f:view> <html xmlns="http://www.w3.org/1999/ xhtml"> <head> <title>...</title> </head> <body> ... </body> </f:view> </jsp:root> </pre>

JavaServer Faces

By Cay S. Horstmann

These common tasks give you a crash course into using JSF.

Text field

page.jspx

```
<h:inputText value="#{bean1.luckyNumber}">
```

faces-config.xml

```

<managed-bean>
  <managed-bean-name>bean1</managed-bean-name>
  <managed-bean-class>com.corejsf.SampleBean</
  managed-bean-class>
  <managed-bean-scope>session</managed-bean-scope>
</managed-bean>

```

com/corejsf/SampleBean.java

```

public class SampleBean {
    public int getLuckyNumber() { ... }
    public void setLuckyNumber(int value) { ... }
    ...
}

```

Button

page.jspx

```
<h:commandButton value="press me" action="#{bean1.
  login}" />
```

faces-config.xml

```

<navigation-rule>
  <navigation-case>
    <from-outcome>success</from-outcome>
    <to-view-id>/success.jspx</to-view-id>
  </navigation-case>
  <navigation-case>
    <from-outcome>error</from-outcome>
    <to-view-id>/error.jspx</to-view-id>
    <redirect>
  </navigation-case>
</navigation-rule>

```

 for Java Developers

www.icefaces.org

Button, continued

com/corejsf/SampleBean.java

```
public class SampleBean {
    public String login() { if (...) return
        "success"; else return "error"; }
    ...
}
```

Radio buttons

Cheese Pickle Mustard Lettuce

page.jspx

```
<h:selectOneRadio value="#{form.condiment}>
    <f:selectItems value="#{form.condimentItems}" />
</h:selectOneRadio>
```

com/corejsf/SampleBean.java

```
public class SampleBean {
    private Map<String, Object> condimentItem = null;
    public Map<String, Object> getCondimentItems() {
        if (condimentItem == null) {
            condimentItem = new LinkedHashMap<String,
                Object>();
            condimentItem.put("Cheese", 1); // label, value
            condimentItem.put("Pickle", 2);
            ...
        }
        return condimentItem;
    }
    public int getCondiment() { ... }
    public void setCondiment(int value) { ... }
    ...
}
```

Validation and Conversion

page.jspx

```
<h:inputText value="#{payment.amount}"
    required="true">
    <f:validateDoubleRange maximum="1000"/>
</h:inputText>
<h:outputText value="#{payment.amount}">
    <f:convertNumber type="currency"/>
    <!-- number displayed with currency symbol and
        group separator: $1,000.00 -->
</h:outputText>
```

Error Messages

Amount Amount: 'too much' is not a number.
 Example: 99

page.jspx

```
<h:outputText value="Amount"/>
<h:inputText id="amount" label="Amount"
    value="#{payment.amount}" />
    <!-- label is used in message text -->
<h:message for="amount"/>
```

Resources and Styles

page.jspx

```
<head>
    <link href="styles.css" rel="stylesheet"
        type="text/css"/>
    ...
</head>
<body>
```

```
...
<h:outputText value="#{msgs.goodbye}!"
    styleClass="goodbye">
...
</body>
```

faces-config.xml

```
<application>
    <resource-bundle>
        <base-name>com.corejsf.messages</base-name>
        <var>msgs</var>
    </resource-bundle>
</application>
```

com/corejsf/messages.properties

goodbye=Goodbye

com/corejsf/messages_de.properties

goodbye=Auf Wiedersehen

styles.css

```
.goodbye {
    font-style: italic;
    font-size: 1.5em;
    color: #eee;
}
```

Table with links

Name	
Washington, George	Delete
Jefferson, Thomas	Delete
Lincoln, Abraham	Delete
Roosevelt, Theodore	Delete

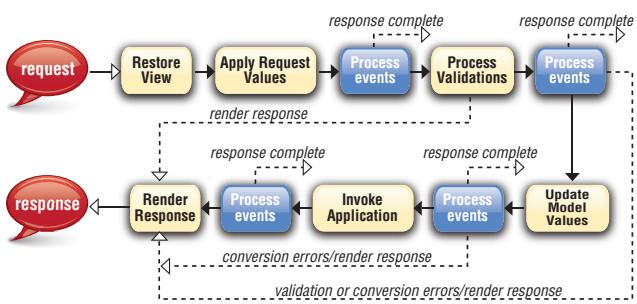

page.jspx

```
<h:dataTable value="#{bean1.entries}" var="row"
    styleClass="table" rowClasses="even,odd">
    <h:column>
        <f:facet name="header">
            <h:outputText value="Name"/>
        </f:facet>
        <h:outputText value="#{row.name}"/>
    </h:column>
    <h:column>
        <h:commandLink value="Delete" action="#{bean1.
            deleteAction}" immediate="true">
            <f:setPropertyActionListener target="#{bean1.
                idToDelete}"
                value="#{row.id}"/>
        </h:commandLink>
    </h:column>
</h:dataTable>
```

com/corejsf/SampleBean.java

```
public class SampleBean {
    private int idToDelete;
    public void setIdToDelete(int value) {idToDelete
        = value; }
    public String deleteAction() {
        // delete the entry whose id is idToDelete
        return null;
    }
    public List<Entry> getEntries() {...}
    ...
}
```

LIFECYCLE

faces-config.xml

The faces-config.xml file contains a sequence of the following entries.

- managed-bean
 1. description, display-name, icon (optional)
 2. managed-bean-name
 3. managed-bean-class
 4. managed-bean-scope
 5. managed-property (0 or more, other optional choices are map-entries and list-entries which are not shown here)
 1. description, display-name, icon (optional)
 2. property-name
 3. value (other choices are null-value, map-entries, list-entries which are not shown here)
 - navigation-rule
 1. description, display-name, icon (optional)
 2. from-view-id (optional, can use wildcards)
 3. navigation-case (1 or more)
 - from-action (optional, not common)
 - from-outcome
 - to-view-id
 - application
 - resource-bundle
 - 1. base-name
 - 2. var
 - action-listener, default-render-kit-id, resource-bundle, view-handler, state-manager, el-resolver, property-resolver, variable-resolver, application-extension (details not shown)
 - converter
 - converter-id
 - converter-class
 - Optional initialization (not shown here)
 - validator
 - validator-id
 - validator-class
 - Optional initialization (not shown here)
 - lifecycle
 - phase-listener
 - component, factory, referenced-bean, render-kit, faces-config-extension (details not shown)

web.xml

```
<?xml version="1.0"?>
<web-app xmlns="http://java.sun.com/xml/ns/javaee"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://java.sun.com/xml/ns/javaee/

    <url-pattern>*.faces</url-pattern>
    <!-- Another popular URL pattern is /faces/* -->
  </servlet-mapping>
  <welcome-file-list>
    <welcome-file>index.faces</welcome-file>
    <!-- Create a blank index.faces (in addition to
        index.jspx) -->
    <welcome-file>index.html</welcome-file>
    <!-- Use <meta http-equiv="Refresh" content=
        "0; URL=index.faces"/> -->
  </welcome-file-list>
</web-app>
```

THE JSF EXPRESSION LANGUAGE (EL)

An EL expression is a sequence of literal strings and expressions of the form `base[expr1][expr2]...`. As in JavaScript, you can write `base.identifier` instead of `base['identifier']` or `base["identifier"]`. The base is one of the names in the table below or a name defined in `faces-config.xml`.

<code>header</code>	A Map of HTTP header parameters, containing only the first value for each name.
<code>headerValues</code>	A Map of HTTP header parameters, yielding a String[] array of all values for a given name.
<code>param</code>	A Map of HTTP request parameters, containing only the first value for each name.
<code>paramValues</code>	A Map of HTTP request parameters, yielding a String[] array of all values for a given name.
<code>cookie</code>	A Map of the cookie names and values of the current request.
<code>initParam</code>	A Map of the initialization parameters of this web application.
<code>requestScope</code>	A Map of all request scope attributes.
<code>sessionScope</code>	A Map of all session scope attributes.
<code>applicationScope</code>	A Map of all application scope attributes.
<code>facesContext</code>	The FacesContext instance of this request.
<code>view</code>	The UIViewRoot instance of this request.

The JSF Expression Language (EL), continued

There are two expression types:

- Value expression: a reference to a bean property or an entry in a map, list, or array. Examples:
`userBean.name` calls `getName` or `setName` on the `userBean` object
`pizza.choices[var]` calls `pizza.getChoices().get(var)` or `pizza.getChoices().put(var, ...)`
- Method expression: a reference to a method and the object on which it is to be invoked. Example:
`userBean.login` calls the `login` method on the `userBean` object when it is invoked.

In JSF, EL expressions are enclosed in `#{...}` to indicate *deferred evaluation*. The expression is stored as a string and evaluated when needed. In contrast, JSP uses immediate evaluation, indicated by `${...}` delimiters.

JSF CORE TAGS

Tag	Description/ Attributes	
<code>f:view</code>	Creates the top-level view	
	<code>locale</code>	The locale for this view.
	<code>renderKitId</code> (JSF 1.2)	The render kit ID for this view
	<code>beforePhase</code> , <code>afterPhase</code>	Phase listeners that are called in every phase except "restore view"
<code>f:subview</code>	Creates a subview of a view	
	<code>binding, id, rendered</code>	Basic attributes
<code>f:facet</code>	Adds a facet to a component	
	<code>name</code>	the name of this facet
<code>f:attribute</code>	Adds an attribute to a component	
	<code>name, value</code>	the name and value of the attribute to set
<code>f:param</code>	Constructs a parameter child component	
	<code>name</code>	An optional name for this parameter component.
	<code>value</code>	The value stored in this component.
	<code>binding, id</code>	Basic attributes
<code>f:actionListener</code> <code>f:valueChangeListener</code>	Adds an action listener or value change listener to a component	
	<code>type</code>	The name of the listener class
<code>f:setPropertyChangeListener</code> (JSF 1.2)	Adds an action listener to a component that sets a bean property to a given value.	
	<code>value</code>	The bean property to set when the action event occurs
	<code>binding, id</code>	The value to set it to
<code>f:converter</code>	Adds an arbitrary converter to a component	
	<code>converterId</code>	The ID of the converter
<code>f:convertDateTime</code>	Adds a datetime converter to a component	
	<code>type</code>	<code>date</code> (default), <code>time</code> , or <code>both</code>
	<code>dateStyle</code>	<code>default</code> , <code>short</code> , <code>medium</code> , <code>long</code> , or <code>full</code>
	<code>timeStyle</code>	<code>default</code> , <code>short</code> , <code>medium</code> , <code>long</code> , or <code>full</code>
	<code>pattern</code>	Formatting pattern, as defined in <code>java.text.SimpleDateFormat</code>
	<code>locale</code>	Locale whose preferences are to be used for parsing and formatting
	<code>timezone</code>	Time zone to use for parsing and formatting

JSF Core Tags, continued

Tag	Description/ Attributes	
<code>f:convertNumber</code>	Adds a number converter to a component	
	<code>type</code>	<code>number</code> (default), <code>currency</code> , or <code>percent</code>
	<code>pattern</code>	Formatting pattern, as defined in <code>java.text.DecimalFormat</code>
	<code>maxFractionDigits</code>	Maximum number of digits in the fractional part
	<code>minFractionDigits</code>	Minimum number of digits in the fractional part
	<code>maxIntegerDigits</code>	Maximum number of digits in the integer part
	<code>minIntegerDigits</code>	Minimum number of digits in the integer part
	<code>integerOnly</code>	True if only the integer part is parsed (default: <code>false</code>)
	<code>groupingUsed</code>	True if grouping separators are used (default: <code>true</code>)
	<code>locale</code>	Locale whose preferences are to be used for parsing and formatting
	<code>currencyCode</code>	ISO 4217 currency code to use when converting currency values
	<code>currencySymbol</code>	Currency symbol to use when converting currency values
<code>f:validator</code>	Adds a validator to a component	
	<code>validatorId</code>	The ID of the validator
<code>f:validateDoubleRange</code> <code>f:validateLongRange</code> <code>f:validateLength</code>	Validates a double or long value, or the length of a string	
	<code>minimum, maximum</code>	the minimum and maximum of the valid range
<code>f:loadBundle</code>	Loads a resource bundle, stores properties as a Map	
	<code>basename</code>	The resource bundle name
	<code>value</code>	The name of the variable that is bound to the bundle map
<code>f:selectItems</code>	Specifies items for a select one or select many component	
	<code>binding, id</code>	Basic attributes
	<code>value</code>	Value expression that points to a <code>SelectItem</code> , an array or <code>Collection</code> of <code>SelectItem</code> objects, or a <code>Map</code> mapping labels to values.
<code>f:selectItem</code>	Specifies an item for a select one or select many component	
	<code>binding, id</code>	Basic attributes
	<code>itemDescription</code>	Description used by tools only
	<code>itemDisabled</code>	Boolean value that sets the item's disabled property
	<code>itemLabel</code>	Text shown by the item
	<code>itemValue</code>	Item's value, which is passed to the server as a request parameter
	<code>value</code>	Value expression that points to a <code>SelectItem</code> instance
<code>f:verbatim</code>	Adds markup to a JSF page	
	<code>escape</code>	If set to true, escapes <, >, and & characters. Default value is false.
	<code>rendered</code> (JSF 1.2)	Basic attributes

JSF HTML TAGS

Tag	Description
<code>h:form</code>	HTML form
<code>h:inputText</code>	Single-line text input control
	<code>12345678901234567890</code>
<code>h:inputTextarea</code>	Multiline text input control
	<code>line one line two line three</code>
<code>h:inputSecret</code>	Password input control
	<code>*****</code>
<code>h:inputHidden</code>	Hidden field
<code>h:outputLabel</code>	Label for another component for accessibility

JSF HTML tags, continued

Tag	Description	
h:outputLink	HTML anchor	 java.net
h:outputFormat	Like outputText, but formats compound messages	
h:outputText	Single-line text output	
h:commandButton	Button: submit, reset, or pushbutton	<input type="button" value="press me"/>
h:commandLink	Link that acts like a pushbutton.	register
h:message	Displays the most recent message for a component	Amount <input type="text" value="too much"/> Amount:'too much' is not a number. Example: 99
h:messages	Displays all messages	
h:graphicImage	Displays an image	
h:selectOneListbox	Single-select listbox	
h:selectOneMenu	Single-select menu	
h:selectOneRadio	Set of radio buttons	<input checked="" type="radio"/> Cheese <input type="radio"/> Pickle
h:selectBooleanCheckbox	Checkbox	<input type="checkbox"/> Receive email:
h:selectManyCheckbox	Multiselect listbox	<input checked="" type="checkbox"/> Cheese <input type="checkbox"/> Pickle <input checked="" type="checkbox"/> Mustard
h:selectManyListbox	Multiselect listbox	
h:selectManyMenu	Multiselect menu	
h:panelGrid	HTML table	
h:panelGroup	Two or more components that are laid out as one	
h:dataTable	A feature-rich table component	
h:column	Column in a data table	

Basic Attributes

Attribute	Description
id	Identifier for a component
binding	Reference to the component that can be used in a backing bean
rendered	A boolean; false suppresses rendering
styleClass	Cascading stylesheet (CSS) class name
value	A component's value, typically a value binding
valueChangeListener	A method binding to a method that responds to value changes
converter	Converter class name
validator	Class name of a validator that's created and attached to a component
required	A boolean; if true, requires a value to be entered in the associated field

Attributes for h:form

Attribute	Description
binding, id, rendered, styleClass	Basic attributes
accept, acceptcharset, dir, enctype, lang, style, target, title	HTML 4.0 attributes (acceptcharset corresponds to HTML accept-charset)
onblur, onchange, onclick, ondblclick, onfocus, onkeydown, onkeypress, onkeyup, onmousedown, onmousemove, onmouseout, onmouseover, onreset, onsubmit	DHTML events

Attributes for h:inputText, h:inputSecret, h:inputTextarea, and h:inputHidden

12345678901234567890

Attribute	Description
cols	For h:inputTextarea only—number of columns
immediate	Process validation early in the life cycle
redisplay	For h:inputSecret only—when true, the input field's value is redisplayed when the web page is reloaded
required	Require input in the component when the form is submitted
rows	For h:inputTextarea only—number of rows
valueChangeListener	A specified listener that's notified of value changes
binding, converter, id, rendered, required, styleClass, value, validator	Basic attributes
accesskey, alt, dir, disabled, lang, maxlength, readonly, size, style, tabindex, title	HTML 4.0 pass-through attributes—alt, maxlength, and size do not apply to h:inputTextarea. None apply to h:inputHidden
onblur, onchange, onclick, ondblclick, onfocus, onkeydown, onkeypress, onkeyup, onmousedown, onmousemove, onmouseout, onmouseover, onselect	DHTML events. None apply to h:inputHidden

Attributes for h:outputText and h:outputFormat

Attribute	Description
escape	If set to true, escapes <, >, and & characters. Default value is true.
binding, converter, id, rendered, styleClass, value	Basic attributes
style, title	HTML 4.0

Attributes for h:outputLabel

Attribute	Description
for	The ID of the component to be labeled.
binding, converter, id, rendered, value	Basic attributes

Attributes for h:graphicImage

Attribute	Description
binding, id, rendered, styleClass, value	Basic attributes
alt, dir, height, ismap, lang, longdesc, style, title, url, usemap, width	HTML 4.0
onblur, onchange, onclick, ondblclick, onfocus, onkeydown, onkeypress, onkeyup, onmousedown, onmousemove, onmouseout, onmouseover, onselect	DHTML events

Attributes for h:commandButton and h:commandLink

Attribute	Description
action	If specified as a string: Directly specifies an outcome used by the navigation handler to determine the JSF page to load next as a result of activating the button or link If specified as a method binding: The method has this signature: String methodName(); the string represents the outcome
actionListener	A method binding that refers to a method with this signature: void methodName(ActionEvent)
charset	For h:commandLink only—The character encoding of the linked reference
image	For h:commandButton only—A context-relative path to an image displayed in a button. If you specify this attribute, the HTML input's type will be image.
immediate	A boolean. If false (the default), actions and action listeners are invoked at the end of the request life cycle; if true, actions and action listeners are invoked at the beginning of the life cycle.

h:commandButton and h:commandLink, continued

Attribute	Description
type	For h:commandButton: The type of the generated input element: button, submit, or reset. The default, unless you specify the image attribute, is submit. For h:commandLink: The content type of the linked resource; for example, text/html, image/gif, or audio/basic
value	The label displayed by the button or link. You can specify a string or a value reference expression.
accesskey, alt, binding, id, lang, rendered, styleClass, value	Basic attributes
coords (h:commandLink only), dir, disabled (h:commandButton only), hreflang (h:commandLink only), lang, readonly, rel (h:commandLink only), rev (h:commandLink only), shape (h:commandLink only), style, tabIndex, target (h:commandLink only), title, type	HTML 4.0
onblur, onchange, onclick, ondblclick, onfocus, onkeydown, onkeypress, onkeyup, onmousedown, onmousemove, onmouseout, onmouseover, onmouseup, onselect	DHTML events

Attributes for h:outputLink

Attribute	Description
accesskey, binding, converter, id, lang, rendered, styleClass, value	Basic attributes
charset, coords, dir, hreflang, lang, rel, rev, shape, style, tabIndex, target, title, type	HTML 4.0
onblur, onchange, onclick, ondblclick, onfocus, onkeydown, onkeypress, onkeyup, onmousedown, onmousemove, onmouseout, onmouseover, onmouseup	DHTML events

Attributes for:

h:selectBooleanCheckbox, h:selectManyCheckbox, h:selectOneRadio, h:selectOneListbox, h:selectManyListbox, h:selectOneMenu, h:selectManyMenu

🧀 Cheese 🥣 Pickle 🥅 Mustard 🥬 Lettuce 🥑 Onions

Attribute	Description
disabledClass	CSS class for disabled elements—for h:selectOneRadio and h:selectManyCheckbox only
enabledClass	CSS class for enabled elements—for h:selectOneRadio and h:selectManyCheckbox only
layout	Specification for how elements are laid out: lineDirection (horizontal) or pageDirection (vertical)—for h:selectOneRadio and h:selectManyCheckbox only
binding, converter, id, immediate, styleClass, required, rendered, validator, value, valueChangeListener	Basic attributes
accesskey, border, dir, disabled, lang, readonly, style, size, tabIndex, title	HTML 4.0—border is applicable to h:selectOneRadio and h:selectManyCheckbox only. size is applicable to h:selectOneListbox and h:selectManyListbox only
onblur, onchange, onclick, ondblclick, onfocus, onkeydown, onkeypress, onkeyup, onmousedown, onmousemove, onmouseout, onmouseover, onmouseup, onselect	DHTML events

Attributes for h:message and h:messages

Amount

Amount: 'too much' is not a number.
Example: 99

Attribute	Description
for	The ID of the component whose message is displayed—applicable only to h:message
errorClass	CSS class applied to error messages
errorStyle	CSS style applied to error messages
fatalClass	CSS class applied to fatal messages
fatalStyle	CSS style applied to fatal messages
globalOnly	Instruction to display only global messages—applicable only to h:messages. Default: false
infoClass	CSS class applied to information messages
infoStyle	CSS style applied to information messages
layout	Specification for message layout: table or list—applicable only to h:messages
showDetail	A boolean that determines whether message details are shown. Defaults are false for h:messages, true for h:message
showSummary	A boolean that determines whether message summaries are shown. Defaults are true for h:messages, false for h:message
tooltip	A boolean that determines whether message details are rendered in a tooltip; the tooltip is only rendered if showDetail and ShowSummary are true
warnClass	CSS class for warning messages
warnStyle	CSS style for warning messages
binding, id, rendered, styleClass	Basic attributes
style, title	HTML 4.0

Attributes for h:panelGrid

Attribute	Description
bgcolor	Background color for the table
border	Width of the table's border
cellpadding	Padding around table cells
cellspacing	Spacing between table cells
columnClasses	Comma-separated list of CSS classes for columns
columns	Number of columns in the table
footerClass	CSS class for the table footer
frame	Specification for sides of the frame surrounding the table that are to be drawn; valid values: none, above, below, hsides, vsides, lhs, rhs, box, border
headerClass	CSS class for the table header
rowClasses	Comma-separated list of CSS classes for rows
rules	Specification for lines drawn between cells; valid values: groups, rows, columns, all
summary	Summary of the table's purpose and structure used for non-visual feedback such as speech
binding, id, rendered, styleClass, value	Basic attributes
dir, lang, style, title, width	HTML 4.0
onclick, ondblclick, onkeydown, onkeypress, onkeyup, onmousedown, onmousemove, onmouseout, onmouseover, onmouseup	DHTML events

Attributes for h:panelGroup

Attribute	Description
binding, id, rendered, styleClass	Basic attributes
style	HTML 4.0

Attributes for h:dataTable

Attribute	Description
bgcolor	Background color for the table
border	Width of the table's border
cellpadding	Padding around table cells
cellspacing	Spacing between table cells
columnClasses	Comma-separated list of CSS classes for columns
first	Index of the first row shown in the table
footerClass	CSS class for the table footer
frame	Frame Specification for sides of the frame surrounding the table that are to be drawn; valid values: none, above, below, hsides, vsides, lhs, rhs, box, border
headerClass	CSS class for the table header
rowClasses	Comma-separated list of CSS classes for rows
rules	Specification for lines drawn between cells; valid values: groups, rows, columns, all
summary	Summary of the table's purpose and structure used for non-visual feedback such as speech

Attributes for h:dataTable, continued

Attribute	Description
var	The name of the variable created by the data table that represents the current item in the value
binding, id, rendered, styleClass, value	Basic attributes
dir, lang, style, title, width	HTML 4.0
onclick, ondblclick, onkeydown, onkeypress, onkeyup, onmousedown, onmousemove, onmouseout, onmouseover, onmouseup	DHTML events

Attributes for h:column

Attribute	Description
headerClass (JSF 1.2)	CSS class for the column's header
footerClass (JSF 1.2)	CSS class for the column's footer
binding, id, rendered	Basic attributes

ABOUT THE AUTHOR

Cay S. Horstmann

Cay S. Horstmann has written many books on C++, Java and object-oriented development, is the series editor for Core Books at Prentice-Hall and a frequent speaker at computer industry conferences. For four years, Cay was VP and CTO of an Internet startup that went from 3 people in a tiny office to a public company. He is now a computer science professor at San Jose State University. He was elected Java Champion in 2005.
